AO Aviation's LED Position/Anti-collision Light STC provides unparalleled performance with the Whelen Orion 600 Series wing light assembly. Fully TSO'd, this light outperforms all its competitors, adding safety for you and your passengers. Don't settle for copy products, "FAA Approved" does not ensure a product meets the same quality standard you have come to trust with Whelen lights.

This STC allows you or your mechanic to simply modify your OEM wingtip to accept the Whelen 600 Light assembly. All necessary parts, wiring, and hardware are included with the kit.

It's time to add the same level of safety to your legacy airplane that new aircraft provide. Add a level safety knowing that when entering congested airspace you can simply switch "LIGHTS ON" and provide the best in air-to-air recognition and collision avoidance available.

Flash Rate	45 FPM
Operating Voltage	9 - 14 VDC
Position Lts. Current	0.48 Amps
Anti-Collision Lts. (Avg.)	1.0 Amps
TSO-C30c	Yes
TSO-C96a	Yes
Special Installation Tools	None
Cold Weather Operation	Yes
STC Certification	USA
